

Smart Expense & Budget Tracker

Academic Project Idea Document

Smart Expense & Budget Tracker - System Flow

1. Overview

The Smart Expense & Budget Tracker is a personal finance management system designed to help users manage their money effectively. It allows users to record daily expenses, set monthly budgets, and analyze spending patterns in an organized way.

2. Problem Statement

Many people know their monthly income, but they do not track their daily expenses properly. As a result, they often overspend, lose control of their budget, and fail to understand where their money is going.

3. Proposed Solution

This system provides a simple digital solution where users can enter their monthly income, define a budget, record daily expenses, and view monthly reports and analysis. It helps users become more aware of their spending habits.

4. Main Objective

The main objective of this project is to help users develop better financial management habits by making daily expense tracking simple, organized, and easy to analyze.

5. Key Features

- Monthly income setup
- Monthly budget planning

- Daily expense recording
- Expense categorization
- Monthly expense summary
- Spending pattern analysis
- Overspending alerts

6. How the System Works

- 1 The user enters their monthly income.
- 2 The user sets a monthly budget limit.
- 3 The user records daily expenses with category and amount.
- 4 The system stores and organizes expense data.
- 5 At the end of the month, the system generates summaries and analysis.

7. Expected Outcome

This project will help users track expenses regularly, stay within their budget, understand spending behavior, and improve savings habits over time.

8. Short Project Statement

A system that helps users manage monthly income and budget by tracking daily expenses and analyzing spending patterns.
